

WOOD FORMERS®

wooden kit with metal snaps,
for girls and boys ;o)

2018
2019

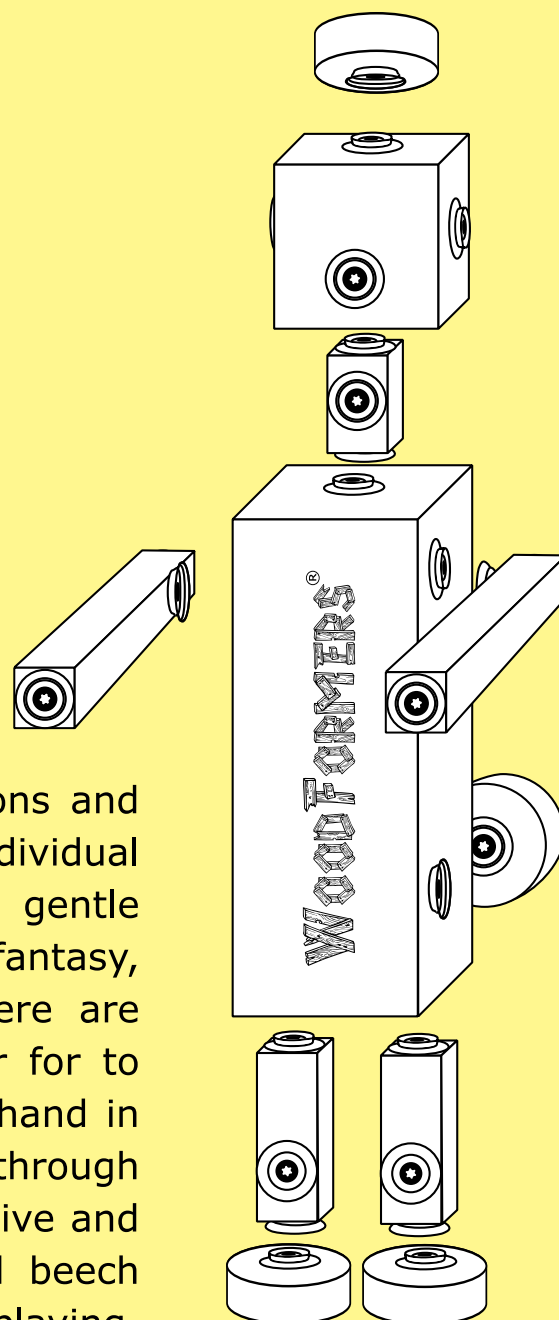

SINCE 2014

KARLŠTEJN toys
Petra & Jiri Modr ;o)

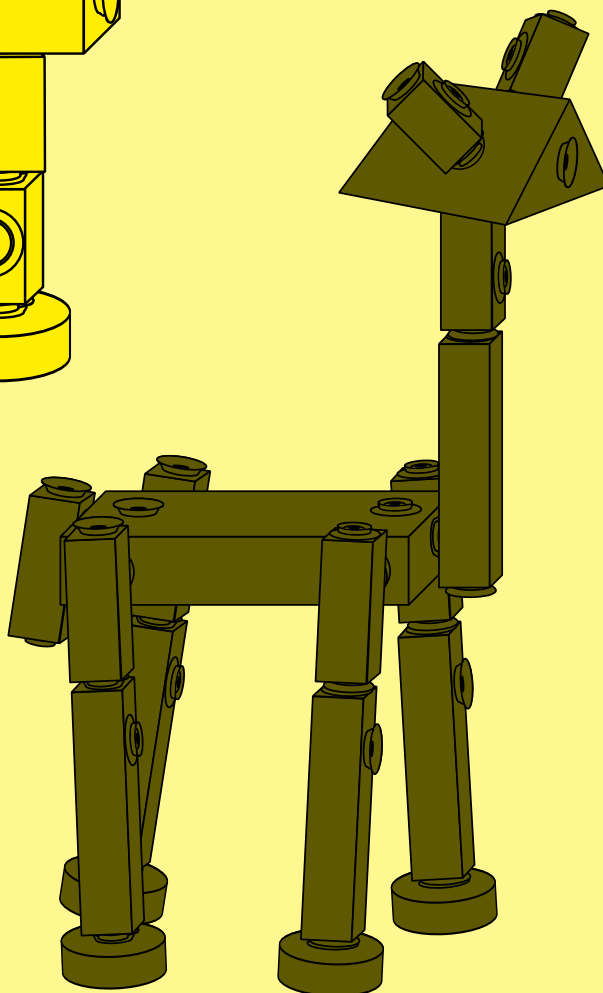

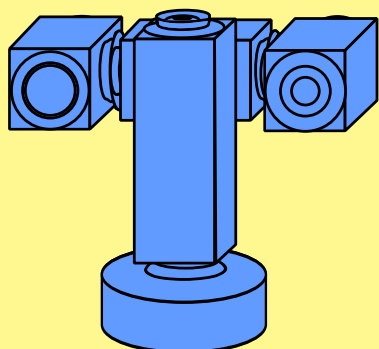

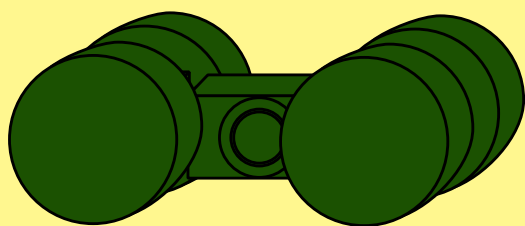

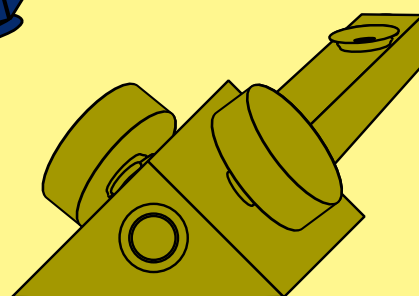

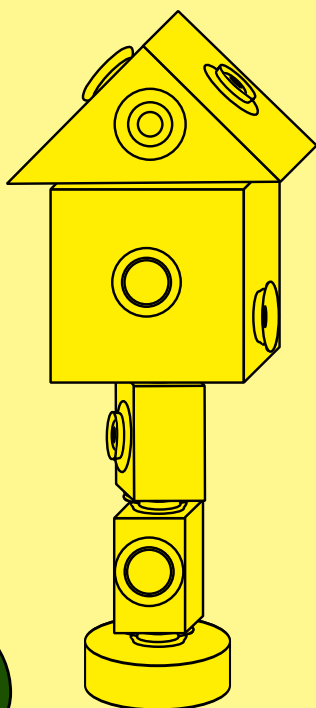

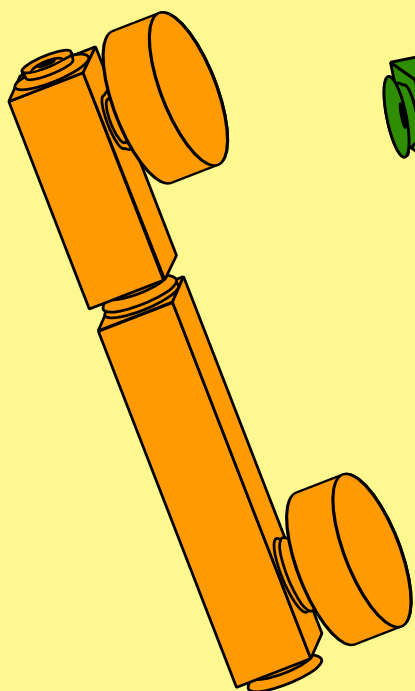

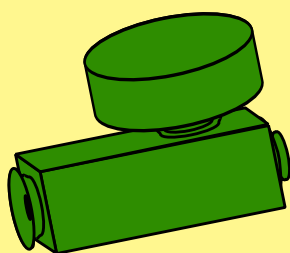

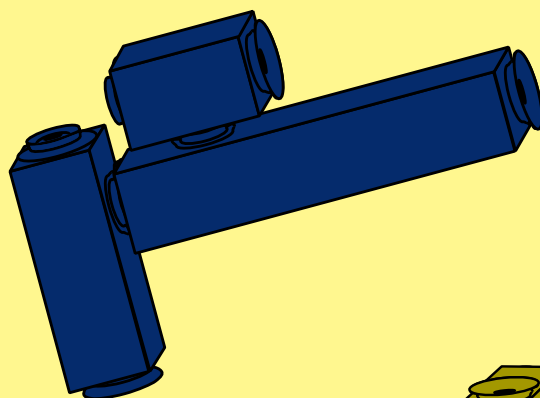

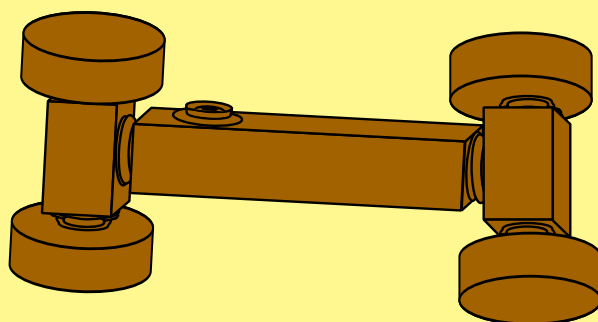

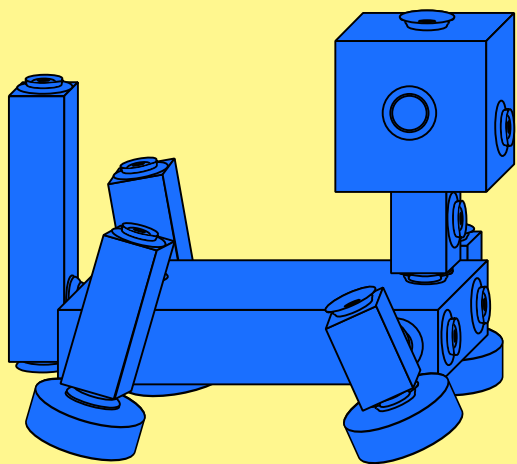

WoodFormers® is a bit different wooden kit with metal snaps, for girls and boys. We attach lot of metal snaps by screws on the wooden parts of our kit, and thus give our toy a whole new dimension. The metal snaps are with fine-tuned placing, because it was tested by very stern testing team.

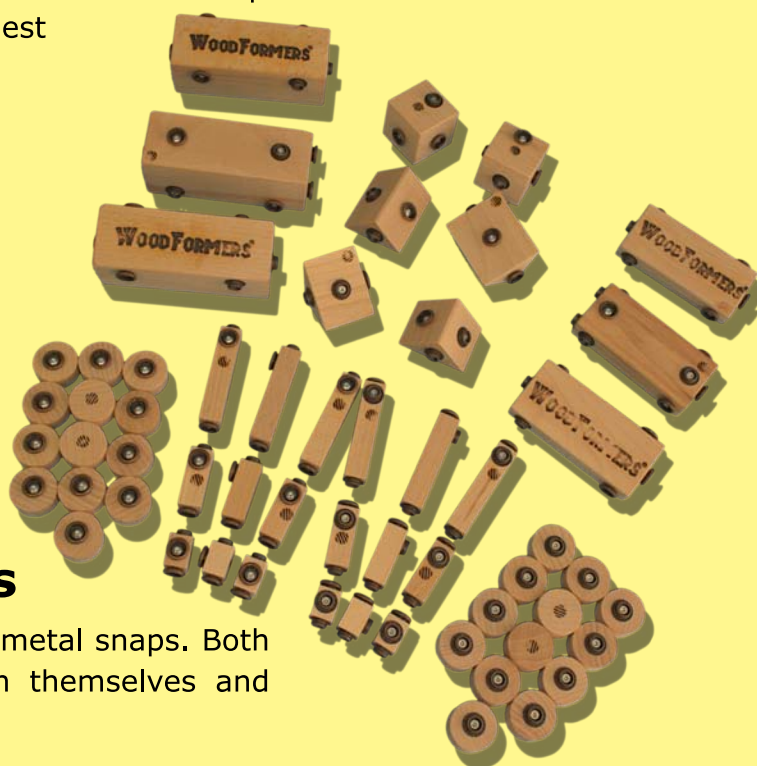

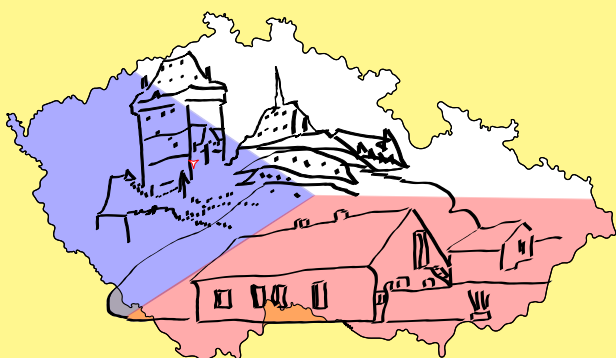

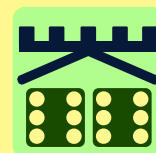

All this enables to do thousands creations and the creations are transferable and the individual joints rotate too. Children practice gentle motorcycle fingers by playing, develop fantasy, and must to think about building. There are only two pieces attached to each other for to ignite fantasy. The kit we make by our hand in the Czech Republic. Each cube passes through our hands several times. We use a massive and only mechanically machined dried hard beech wood. It successfully resists dirt while playing, so it unnecessary to hide under paint its beautiful natural structure. This naked wood is very pleasant to the touch and the look.

Our construction kit rattles, the construction of the snaps allows by to look or to tactilely distinguish what fits together, still smells like wood, and also tastes this way ;o) Our **WoodFormers®** kit from Karlštejn occupies all the senses and perhaps even the sixth.

96 products from us

- (9 mini sets + 3 big sets) x 4 colors x 2 types
- all this is fully compatible between themselves
- every a piece has a mark and the big ones has brand too
- every set has one mark, type and color of metal snaps
- and we can make sets by your request

2 snap fasteners types

We make our toys with two types of metal snaps. Both types are fully compatible between themselves and you can combine their features.

Roto

The ROTO poppers have a lighter push, so even the smallest children from 3 years can join the pieces easily and thus fully enjoy building with our Czech kit. Other advantages of the ROTO type are that the poppers become easier to rotate after turning, so children can drive their creations and freely rotate with simple joints. The ROTO type is also safer for smaller children because it is impossible to build a too high and heavy assembly because the weight of the connected parts exceeds the expansion force of the poppers.

It is time to move on to this second type of poppers and use both parts and new ones to take advantage of both versions. ROTO poppers are available in four attractive colors.

Construct

The CONSTRUCT poppers need a stronger push and are therefore more suitable for children up to 5 years old when they have enough strength in their fingers to uncouple and untie the pieces. The main advantage of the CONSTRUCT type is that with the harder pressing the drum rotates less, so you can build higher and larger. With the stronger joint, you can build larger assemblies, so not only the fantasy of the children moves into another dimension. CONSTRUCT is therefore not only suitable for small but larger children and adults.

And so we recommend that you get the first type with its great benefits and use both types together, which you will really love when building. CONSTRUCT poppers are available in four attractive colors.

4 snap fasteners colors

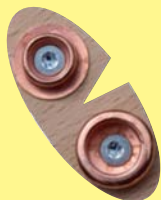

Our color design of the poppers is fully combinable with each other, it is just aesthetic and is available in both ROTO and CONSTRUCT type. Our Klik-Klap poppers are certified for use in toys EU-wide. Klik-Klap poppers with surface finish:

"**arctic**" comes in an attractive icy arctic silver version with a hint of endless ice sheets. This icy silver appearance is achieved by blue zinc used when coating them.

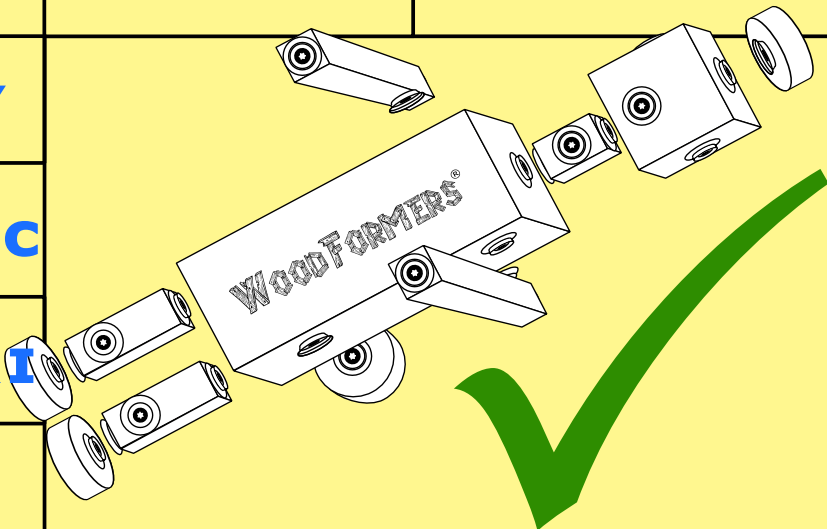

"**army**" comes in an attractive military design for every situation and brisk discipline. This great old-fashioned military look is made by an artificially crafted patina of brass and the result is dark yellow-green, all of this is achieved by the specific process of plating the metal poppers.

"**safari**" comes in an attractive African-adventure design with the challenge of exploring unimaginable savannah and unexplored areas. This amazing old-fashioned look is achieved by an artificially created patina of copper; the result is dark red-brown, which is achieved by a double plating procedure.

"**inca**" comes in an attractive design reminiscent of the Inca red gold of old times, which attracted not only the excellent sailors of the time. This luxurious and partly industrial appearance of the popper is achieved by the specific copper plating process.
